

Assignment 4 - ERD and Business Rules (Submission)

1. Project Description

A simple web-based to-do list application that helps users organize and manage their daily tasks and projects. Users can create tasks, mark them as complete, edit existing tasks, and delete tasks they no longer need. In this version, we include a **Category** system for better task organization.

2. Business Rules

User and Task:

A USER may create many TASKs. A TASK is created by exactly one USER.

Task and Category:

Each TASK may belong to exactly one CATEGORY. A CATEGORY may contain many TASKs.

3. Entity Relationship Diagram (ERD)

This ERD follows the reference style with three entities: **USER**, **TASK**, and **CATEGORY**. It includes composite attributes, relationship labels on both ends, and textbook cardinality symbols (|| and o<).
